DESIGN PARSER INSTALLATION GUIDE & USER MANUAL

Prerequisites:
Java 8 or higher.
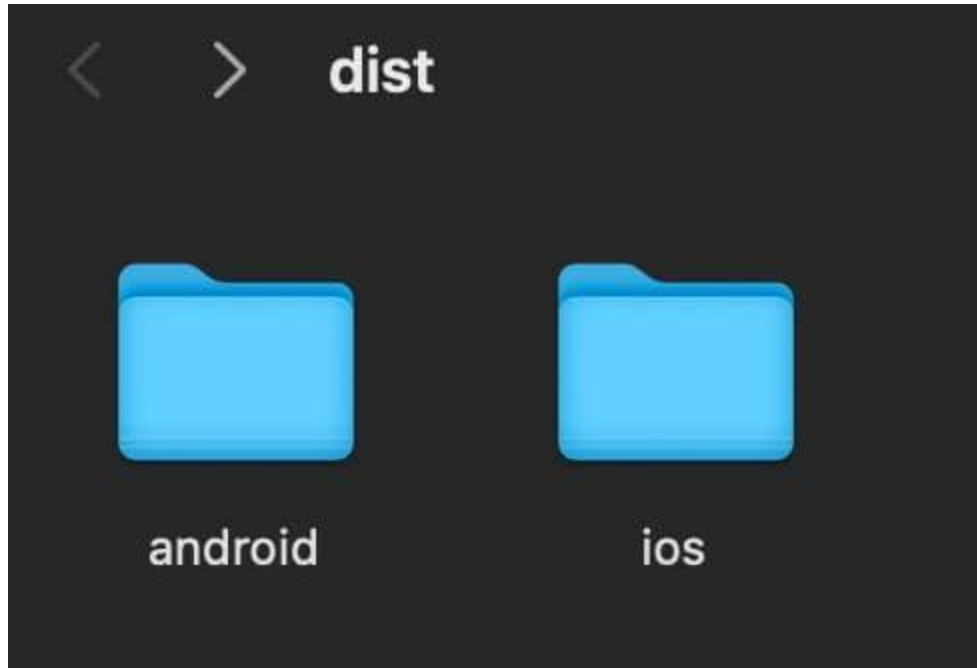

After downloading design parser from the link below;
https://github.com/CankayaUniversity/ceng-407-408-2020-2021-Design-Parser-for-IOS-and-Android/releases/tag/0.81-alpha

(or you should download the latest release.)

A CLI screen welcomes you after properly installing the program. Here you can ask for commands or jump in with create-project command. After you enter "parser-create", the program will create a folder called "dist".

After entering "parser-run" and "parser-export" commands, the program creates android and ios folders inside the dist folder as you can see below.

If you want to take a look at commands that you can enter via terminal, you can type "help" and see all available commands as below.

```
*******************
Create project: run parser-create. This create dist folder.
Run project: run parser-run. This create android or ios folder in the dist folder with specific arguments options.
Export project: run parser-export. This export android or ios in dist folder.
```
